REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The invention is drawn to recombinant, fully glycosylated, human zona pellucida 3, and more specifically to a portion of this well known protein consisting of SEQ ID No: 2 (which is amino acids 309-348 of the full length protein). The invention is novel and unobvious because applicant have discovered that using conservative substitutions in this region, to amino acids which are evolutionarily non-conserved in nature (when a sequence alignment is performed for several zona pellucida's) significantly enhances binding of sperm to an oocyte. These substitutions would non-obvious to one of ordinary skill in the art because substitutions of evolutionary non-conserved amino acids to enhance activity is an unobvious and unreliable method. The sequence substitutions made to SEQ ID No: 2, allows that recombinant human zona pellucida can thus be properly glycosylated, and functions equivalently or better than the wild-type protein. Thus, claims 69-77 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
